—

NO SHORTCUTS

SCOTT VERTIC LINE

SCOTT Vertic Series is our most durable line of outerwear, built for freeskiers pushing their limits down pillows, over cliffs, and stomping the landing. 3L GORE-TEX®, VX™ Active Insulation, and DRYOsphere protect team riders like Dane Tudor, Sam Cohen, Fabian Lentsch, and Arianna Tricomi from the elements and keeps them looking fresh with a freeride specific fit and sleek design. The Vertic line, featuring the Vertic Tour kit, ensures SCOTT outerwear meets the high standards of freeskiers throughout the world in their attempts to conquer their next big line.

SCOTT VERTIC TOUR OUTFIT

SCOTT Vertic Tour lineup is for the freeriders exploring the backcountry, those who want to stay warm, dry, and regulate their heat while ski touring or bootpacking to some of the most amazing places on earth. Used by SCOTT athletes like Dane Tudor, Sam Cohen, Fabian Lentsch and Arianna Tricomi, the Vertic Tour features GORE® C-KNIT™ Technology, a revolutionary fabric that's new to the SCOTT outwear lineup and keeps skiers dry, warm, and protected from the harshest conditions.

1. INTEGRATED COHAESIVE™ CORD-MANAGEMENT HARDWARE embedded in the hood & hem

2. BONDED CHEST POCKETS as core venting with internal security pocket

3. INTERIOR MESH POCKET

NEW GORE® C-KNIT™ TECHNOLOGY

GORE-TEX® 3L FABRIC

4. DETACHABLE BIB with adjustable suspenders

5. CORDURA® ABRASION RESISTANT SCUFF PANELS

6. EXTERIOR THIGH VENTING

7. HOOD HAS 2 PART ADJUSTMENT: hood length at visor + side of hood (field of vision)

8. ZIPPER GUSSET gives extra room at collar when hood is being worn over the helmet

9. NEW HEM ADJUSTMENT with simple zipper and snap closure

FEATURES AND BENEFITS OF THE NEW GORE® C-KNIT™ TECHNOLOGY

- + Optimal comfort with breathability increased by as much as 15 percent*
 - + Lighter garments are possible with a 10 percent reduction in fabric weight*
 - + Long-lasting weather protection backed by the GUARANTEED TO KEEP YOU DRY™ promise
 - + Uncompromised durability without added bulk from the three-layer construction
 - + Visual differentiation from other backings from circular knit pattern
- *Compared to previous 3-layer GORE-TEX® products with tricot backer.

VERTIC LINE OUTERWEAR FABRIC TECHNOLOGIES

Our Research and Development team works with leading manufacturers around the world to deliver revolutionary fabric technologies that protect you from the elements and maximize your enjoyment of outdoor activities, 365 days a year.

GORE-TEX® 3L PRODUCTS – Garments engineered with GORE-TEX® fabric are durably waterproof and windproof, combined with optimized breathability—enduring products that maximize protection and comfort for the wearer.

Unlike the 2-layer construction, this construction bonds the GORE-TEX® membrane to both the outer fabric and the inner lining. The benefit: no movement between the layers, which means less wear and tear, and enhanced durability.

DRYOsphere – DRYOsphere fabrics provide waterproof/breathable barrier from the elements. A shield against water and wind, DRYOsphere fabric also allows for water vapor to escape from the body, keeping you dry and comfortable in any condition.

GORE® C-KNIT™ TECHNOLOGY – The 3-layer GORE-TEX® fabric with GORE® C-KNIT™ backer technology optimises comfort while providing durable, waterproof and windproof protection. The reliable and proven bi-component GORE-TEX® membrane system is bonded to an extremely thin, dense yet lightweight circular knit to form a patent-pending laminate. Weighing up to 10 percent less than previous 3-layer GORE-TEX® fabric, this new laminate improves breathability by as much as 15 percent in a less bulky, more robust three-layer construction. The smooth texture of the knit backing is soft to the touch, and makes the garment easier to slide on and off over other layers.

VX™ ACTIVE INSULATION – Introducing a breakthrough in performance. By combining loose fibers with diverse functions we achieve new levels of balanced performance. Unlike down we are able to choose and combine fibers for moisture management, thermal buffering, warmth to weight, quick dry, loft to weight, resilient long life, soft touch, low fiber/boundary layer effects and more.

Unique structure: The insulation's unique morphology mimics down as if clusters of down were strung together in rows creating unbroken down-like waves. The wavy and spring like structure of these varied fibers ensures even warmth, reliable comfort and protection. Avoiding the thick, thin and void issues of down and continuous filament garments.

SCOTT VERTIC TOUR JACKET

261781

SCOTT is bridging the gap between our Explorair mountaineering line and our Vertic freeride line with the SCOTT Vertic Tour Jacket, a technical uphill ski touring jacket that doesn't sacrifice style or comfort on the downhill. Implementing two different GORE-TEX® fabrics (GORE-TEX® 3L fabric & the new GORE® C-KNIT™ backer technology) for improved comfort, body temperature regulation and movement in this do-it-all, mountain package.

SCOTT EXPLORAIR LINE

For long ascents and deep descents, backcountry skiers and mountaineers call for as much performance from their outerwear as they do from their skis, boots, and bindings. The SCOTT Explorair Line answers their call with a technical line featuring GORE-TEX® Pro and Dermizax®. Our jackets feature a push button adjustable hood, ensuring the proper fit with any headwear choice. Wear these rugged garments on your next tour and enjoy the ride down in style.

TRANSALP SKI TOURING WITH BERGPUNKT

From Nice (FRA) to Vienna (AUT) 1200km across the Alps with SCOTT partner bergpunkt - split into a Transalp South, a Transalp Switzerland and a Transalp East.

The first week of the Transalp South was a 7000m difference in altitude and 70km long. The start was in Nice (FRA) at the Mediterranean Sea and ended at the Mont Blanc. Along the way the bergpunkt mountain guides used SCOTT apparel and equipment.

Each year bergpunkt offers transalp stages for end-consumers to join along. For SCOTT, bergpunkt with its team of 20 mountain guides is an important partner in development of products and promotion.

06 YKK AquaGuard® zippers (Explorair 3L Pant)

EXPLORAIR LINE OUTERWEAR FABRIC TECHNOLOGIES

Our Research and Development team works with leading manufacturers around the world to deliver revolutionary fabric technologies that protect you from the elements and maximize your enjoyment of outdoor activities, 365 days a year.

GORE-TEX® PRO 3L PRODUCTS – Engineered for maximum durability and performance in the most severe conditions, GORE-TEX® Pro garments are ideal for extreme and extended use. With the bonded GORE-TEX® Pro membrane, fabrics increase durability due to decreased friction and see an increase in breathability by 28%.

DRYOsphere – DRYOsphere fabrics provide min. 10,000/10,000 (Explorair Hybrid) waterproof/breathable barrier from the elements. A shield against water and wind, DRYOsphere fabric also allows for water vapor to escape from the body, keeping you dry and comfortable in any condition.

DERMIZAX® – Ideal for heavy duty applications, Toray Dermizax® offers exceptional waterproofness, moisture permeability, and condensation while still offering durable protection. A smart, non-porous membrane helps to absorb perspiration vapor and disperse it through the fabric. With smooth texture, lightweight configuration and high elasticity, garments are noticeably softer and enhance wearer comfort.

DUROxpand – A four-way stretch fabric, DUROxpand gives you the freedom of movement and flexibility for adventures that require a greater range of motion.

ULTIMATE LINE OUTERWEAR FABRIC TECHNOLOGIES

Our Research and Development team works with leading manufacturers around the world to deliver revolutionary fabric technologies that protect you from the elements and maximize your enjoyment of outdoor activities, 365 days a year.

GORE-TEX® 2L PRODUCTS – Ideal for a wide range of outdoor activities, with this construction a GORE-TEX® membrane is bonded to the outer fabric only. The benefit: the separate lining inside improves wearing comfort and versatility. This construction can be combined with insulation, keeping the wearer dry and warm.

DRYOsphere 2L – DRYOsphere fabrics provide min. 10,000/12,000 (Ultimate Dryo 30, 40) and min. 15,000/15,000 (Ultimate Dryo 10, 20) waterproof/breathable barrier from the elements. A shield against water and wind, DRYOsphere fabric also allows for water vapor to escape from the body, keeping you dry and comfortable in any condition.

DERMIZAX® 2L – Ideal for heavy duty applications, Toray Dermizax® offers exceptional waterproofness, moisture permeability, and condensation while still offering durable protection. A smart, non-porous membrane helps to absorb perspiration vapor and disperse it through the fabric. With smooth texture, lightweight configuration and high elasticity, garments are noticeably softer and enhance wearer comfort.

STRATEGIC THERMAL REGULATION (STR) – Representing the most advanced placement of insulation and wicking materials, Strategic Thermal Regulation (STR) results in dynamically performing lightweight garments. STR places insulation where you need it in cold zones and performance mesh in hot zones. The strategic placement ensures the garment will keep you warm and dry without unnecessary bulk.

SCOTT ULTIMATE GTX JACKET

244275

Utilizing a partial Thinsulate™ interior and GORE-TEX® 2 layer exterior, the SCOTT Ultimate GTX Jacket is an all-in-one, design-specific jacket for the all mountain skier looking for the most technical jacket in the Ultimate Line.

SCOTT INSULOFT/ DEFINED LINE

SCOTT products are meant to match up with one another seamlessly, and our full line of layering pieces is no exception. Together with SCOTT outerwear, our layering keeps skiers warm, dry, and ready to tackle the mountain. The layering line is divided into mid layers (Defined Line) and insulation (Insuloft Line). SCOTT offers top range down jackets with e.g. 800 fill power, top of the line PrimaLoft® and wool layering to cover every skier's layering needs. For the second year now, the SCOTT layering series comes with VX™ Active insulation and Downcel, ensuring comfort, warmth, and protection day in, day out.

INSULOFT/DEFINED LINE JACKET FEATURES

Whether you choose your days hiking for turns or enjoying lift-access terrain, our Insuloft/Defined Line jackets are loaded with features to keep you enjoying the experience. Here are just a few of the features you can expect from shells in this line.

01

02

03

04

05

06

01 TRACKMYDOWN™ filling (Insuloft Light Down Jacket)

02 Quilting without stitches and nice stretch (Insuloft Hybrid Downcel)

03 VX™ padding and stretch shell to stretch with the padding (Insuloft VX Hoody)

04 Elastane binding at hood and cuff opening (Insuloft 3M Jacket)

05 Hood with a balaclava design which can fit under a helmet (Defined Warm Hoody)

06 Internal face mask for cold days (Defined Plus Jacket)

INSULOFT/DEFINED LINE OUTERWEAR FABRIC TECHNOLOGIES

Our Research and Development team works with leading manufacturers around the world to deliver revolutionary fabric technologies that protect you from the elements and maximize your enjoyment of outdoor activities, 365 days a year.

TRACKMYDOWN™ – TRACKMYDOWN™ brings all the complexities of down to the consumer through this unique interactive tool. Premium traceable down is much more than just about where it came from, and now you can learn about the exact down inside your jacket and what makes premium down, premium. Where it came from is critical to begin with, but with TRACKMYDOWN™, you will also experience the exact verified fill power, content analysis and ultimate cleanliness - all critical elements that differentiate a generic down from a true performance insulation required by the finest technical gear.

3M™ THINSULATE™ FEATHERLESS INSULATION – A kinder alternative to feathers, 3M™ Thinsulate™ Featherless Insulation is an innovative material to replace natural down. A loose-fill insulation designed by scientists that mimics down when dry and is warmer than down when wet.

- + Mimics down
- + Performs when wet
- + Zero Feathers
- + Washable, Squashable
- + Ultra-Puffed
- + Breathable
- + Cloud-light
- + Hypoallergenic
- + Less fiber migration than down

DOWNCEL – Downcel is a down filled, non-quilted bale. The Downcel bales are created by interweaving two shell fabrics together, producing a non-stitched, cell-like structure that incases the down. Using this method, Downcel eliminates the migration of down that would otherwise occur with quilted seams, improving the performance of the garment by avoiding heat loss.

1. During the weaving process down cells are created by simultaneously interlacing 2 layers of woven structure together at strategic points for ultimate warmth retention.
2. The interlacing of the 2 layers creates a woven baffled cell to prevent down migration.
3. Downcel

VX™ ACTIVE INSULATION – The VX™ Active Insulation System - introducing a breakthrough in performance. By combining loose fibers with diverse functions we achieve new levels of balanced performance. Unlike down we are able to choose and combine fibers for moisture management, thermal buffering, warmth to weight, quick dry, loft to weight, resilient long life, soft touch, hollow fiber/boundary layer effects and more.

Unique structure: The insulation's unique morphology mimics down as if clusters of down were strung together in rows creating unbroken down-like waves. The wavy and spring like structure of these varied fibers ensures even warmth, reliable comfort and protection. Avoiding the thick, thin and void issues of down and continuous filament garments.

POLARTEC® POWER DRY® – This highly breathable fabric maximizes its functions due to a grid construction that enhance the warmth and breathability for a minimal weight. This fabric construction provides superior wicking action, quick dry function and helps to keep your skin dry when you sweat.

PRIMALOFT® SILVER ACTIVE – PrimaLoft® Silver Insulation is the go-to for technical performance in a wide range of activities. Millions of air pockets trap body heat in extreme conditions while a lack of bulk provides uncompromised freedom of movement. The PrimaLoft® proprietary treatment ensures the insulation maintains its warmth even in wet conditions. Durability in a lightweight design for active applications, with breathability, packability and softness, deliver a high-performance insulation without compromise.

SCOTT INSULOFT VX HOODY

261973

The SCOTT Insuloft VX Hoody brings a new hooded layering piece to the line for this season. Featuring full VX™ Active insulation, this hoody is sure to aid in temperature regulation while providing exceptional warmth to weight ratio.

SCOTT VERTIC LINE

SCOTT Vertic Series is our most durable line of outerwear, built for freeskiers pushing their limits down pillows, over cliffs, and stomping the landing. 3L GORE-TEX®, VX™ Active Insulation, and DRYOsphere protect team riders like Dane Tudor, Sam Cohen, Fabian Lentsch, and Arianna Tricomi from the elements and keeps them looking fresh with a freeride specific fit and sleek design. The Vertic line, featuring the Vertic Tour kit, ensures SCOTT outerwear meets the high standards of freeskiers throughout the world in their attempts to conquer their next big line.

VERTIC LINE JACKET & PANT FEATURES

Whether you choose your days hiking for turns or enjoying lift-access terrain, our Vertic Line jackets and pants are loaded with features to keep you enjoying the experience. Here are just a few of the features you can expect from shells in this line.

- 01** New addition of VX™ padding and stretch lining in the body and elbow area drastically increases mobility and warmth (Vertic 2L Insulated Women's Jacket)
- 02** Integrated Cohaesive™ adjustment at hem and hood (Vertic Tour Women's Jacket)
- 03** Additional bonded mesh pocket at inside for storage (Vertic 3L Women's Jacket)
- 04** High performing VX™ insulation in the areas that count (butt and knees, Vertic 2L Insulated Women's Pant)
- 05** New hem adjustment with simple zipper and snap closure (Vertic Tour Women's Pant)

VERTIC LINE OUTERWEAR FABRIC TECHNOLOGIES

Our Research and Development team works with leading manufacturers around the world to deliver revolutionary fabric technologies that protect you from the elements and maximize your enjoyment of outdoor activities, 365 days a year.

GORE-TEX® 3L PRODUCTS – Garments engineered with GORE-TEX® fabric are durably waterproof and windproof, combined with optimized breathability—enduring products that maximize protection and comfort for the wearer.

Unlike the 2-layer construction, this construction bonds the GORE-TEX® membrane to both the outer fabric and the inner lining. The benefit: no movement between the layers, which means less wear and tear, and enhanced durability.

DRYOsphere – DRYOsphere fabrics provide waterproof/breathable barrier from the elements. A shield against water and wind, DRYOsphere fabric also allows for water vapor to escape from the body, keeping you dry and comfortable in any condition.

GORE® C-KNIT™ TECHNOLOGY – The 3-layer GORE-TEX® fabric with GORE® C-KNIT™ backer technology optimises comfort while providing durable, waterproof and windproof protection. The reliable and proven bi-component GORE-TEX® membrane system is bonded to an extremely thin, dense yet lightweight circular knit to form a patent-pending laminate. Weighing up to 10 percent less than previous 3-layer GORE-TEX® fabric, this new laminate improves breathability by as much as 15 percent in a less bulky, more robust three-layer construction. The smooth texture of the knit backing is soft to the touch, and makes the garment easier to slide on and off over other layers.

VX™ ACTIVE INSULATION – Introducing a breakthrough in performance. By combining loose fibers with diverse functions we achieve new levels of balanced performance. Unlike down we are able to choose and combine fibers for moisture management, thermal buffering, warmth to weight, quick dry, loft to weight, resilient long life, soft touch, low fiber/boundary layer effects and more.

Unique structure: The insulation's unique morphology mimics down as if clusters of down were strung together in rows creating unbroken down-like waves. The wavy and spring like structure of these varied fibers ensures even warmth, reliable comfort and protection. Avoiding the thick, thin and void issues of down and continuous filament garments.

SCOTT FREESKI ATHLETES

The Vertic Line is the first choice for several of our international SCOTT Freeski athletes, such as Arianna Tricomi from Italy who finished 2nd overall in the 2016 Freeride World Tour.

Her season has been more than impressive. She has not shown any hesitation and most of the time she has been the one setting the high level for the other ladies to try to reach.

ARIANNA TRICOMI (ITA)

"I LIKE THE SIMPLE STYLE AND COLORS, THE FACT THAT IT'S ALWAYS WARM ENOUGH AND WATERPROOF AND I LOVE ALL THOSE POCKETS WHERE I CAN PUT ALL MY STUFF! THIS HELPS ME PERFORM ALL DAY LONG AND I NEVER GET COLD OR WET!"

SCOTT VERTIC TOUR OUTFIT

SCOTT Vertic Tour lineup is for the freeriders exploring the backcountry, those who want to stay warm, dry, and regulate their heat while ski touring or bootpacking to some of the most amazing places on earth. Used by SCOTT athletes like Dane Tudor, Sam Cohen, Fabian Lentsch and Arianna Tricomi, the Vertic Tour features GORE® C-KNIT™ Technology, a revolutionary fabric that's new to the SCOTT outerwear lineup and keeps skiers dry, warm, and protected from the harshest conditions.

1. INTEGRATED COHAESIVE™ CORD-MANAGEMENT HARDWARE embedded in the hood & hem

2. BONDED CHEST POCKETS as core venting with internal security pocket

3. INTERIOR MESH POCKET

NEW GORE® C-KNIT™ TECHNOLOGY

GORE-TEX® 3L FABRIC

4. DETACHABLE BIB with adjustable suspenders

5. CORDURA® ABRASION RESISTANT SCUFF PANELS

6. EXTERIOR THIGH VENTING

7. HOOD HAS 2 PART ADJUSTMENT: hood length at visor + side of hood (field of vision)

8. ZIPPER GUSSET gives extra room at collar when hood is being worn over the helmet

9. NEW HEM ADJUSTMENT with simple zipper and snap closure

FEATURES AND BENEFITS OF THE NEW GORE® C-KNIT™ TECHNOLOGY

- + Optimal comfort with breathability increased by as much as 15 percent*
 - + Lighter garments are possible with a 10 percent reduction in fabric weight*
 - + Long-lasting weather protection backed by the GUARANTEED TO KEEP YOU DRY™ promise
 - + Uncompromised durability without added bulk from the three-layer construction
 - + Visual differentiation from other backings from circular knit pattern
- *Compared to previous 3-layer GORE-TEX® products with tricot backer.

SCOTT VERTIC TOUR WOMEN'S JACKET

261799

SCOTT is bridging the gap between our Explorair mountaineering line and our Vertic freeride line with the SCOTT Vertic Tour Women's Jacket, a ski touring favorite that doesn't compromise comfort and style for technology and design. Implementing two different GORE-TEX® fabrics (GORE-TEX® 3L & the new GORE® C-KNIT™ backer technology) for improved comfort, body temperature regulation and movement in this do-it-all, mountain package.

EXPLORAIR LINE OUTERWEAR FABRIC TECHNOLOGIES

Our Research and Development team works with leading manufacturers around the world to deliver revolutionary fabric technologies that protect you from the elements and maximize your enjoyment of outdoor activities, 365 days a year.

GORE-TEX® PRO 3L PRODUCTS – Engineered for maximum durability and performance in the most severe conditions, GORE-TEX® Pro garments are ideal for extreme and extended use. With the bonded GORE-TEX® Pro membrane, fabrics increase durability due to decreased friction and see an increase in breathability by 28%.

DRYOsphere – DRYOsphere fabrics provide min. 10,000/10,000 (Explorair Hybrid) waterproof/breathable barrier from the elements. A shield against water and wind, DRYOsphere fabric also allows for water vapor to escape from the body, keeping you dry and comfortable in any condition.

DERMIZAX® – Ideal for heavy duty applications, Toray Dermizax® offers exceptional waterproofness, moisture permeability, and condensation while still offering durable protection. A smart, non-porous membrane helps to absorb perspiration vapor and disperse it through the fabric. With smooth texture, lightweight configuration and high elasticity, garments are noticeably softer and enhance wearer comfort.

DUROxpand – A four-way stretch fabric, DUROxpand gives you the freedom of movement and flexibility for adventures that require a greater range of motion.

ULTIMATE LINE OUTERWEAR FABRIC TECHNOLOGIES

Our Research and Development team works with leading manufacturers around the world to deliver revolutionary fabric technologies that protect you from the elements and maximize your enjoyment of outdoor activities, 365 days a year.

GORE-TEX® 2L PRODUCTS – Ideal for a wide range of outdoor activities, with this construction a GORE-TEX® membrane is bonded to the outer fabric only. The benefit: the separate lining inside improves wearing comfort and versatility. This construction can be combined with insulation, keeping the wearer dry and warm.

DRYOsphere 2L – DRYOsphere fabrics provide min. 10,000/12,000 (Ultimate Dryo 30, 40) and min. 15,000/15,000 (Ultimate Dryo 10, 20) waterproof/breathable barrier from the elements. A shield against water and wind, DRYOsphere fabric also allows for water vapor to escape from the body, keeping you dry and comfortable in any condition.

DERMIZAX® 2L – Ideal for heavy duty applications, Toray Dermizax® offers exceptional waterproofness, moisture permeability, and condensation while still offering durable protection. A smart, non-porous membrane helps to absorb perspiration vapor and disperse it through the fabric. With smooth texture, lightweight configuration and high elasticity, garments are noticeably softer and enhance wearer comfort.

STRATEGIC THERMAL REGULATION (STR) – Representing the most advanced placement of insulation and wicking materials, Strategic Thermal Regulation (STR) results in dynamically performing lightweight garments. STR places insulation where you need it in cold zones and performance mesh in hot zones. The strategic placement ensures the garment will keep you warm and dry without unnecessary bulk.

SCOTT INSULOFT/ DEFINED LINE

SCOTT products are meant to match up with one another seamlessly, and our full line of layering pieces is no exception. Together with SCOTT outerwear, our layering keeps skiers warm, dry, and ready to tackle the mountain. The layering line is divided into mid layers (Defined Line) and insulation (Insuloft Line). SCOTT offers top range down jackets with e.g. 800 fill power, top of the line PrimaLoft® and wool layering to cover every skier's layering needs. For the second year now, the SCOTT layering series comes with VX™ Active insulation and Downcel, ensuring comfort, warmth, and protection day in, day out.

LAYER LIKE A PRO

How you dress for your day in the mountains can make or break your experience. Whether you're a resort skier, mountaineer, or big mountain freerider, strategic layering is key to ensure all day comfort and enjoyment. Following these simple steps will allow you to make quickly adapt based on your activity level and changing weather conditions. Each layer has a function:

BASE LAYER

Staying dry in cold weather environments is the first step in ensuring all day comfort. As the name implies, the base layer is your next-to-skin layer and is vital for actively managing perfusion. It helps regulate core temperature by moving your body's perspiration away from your skin.

MIDLAYER / INSULATING LAYER

The midlayer, or insulating layer, provides the warmth you need to play in the cold. The insulating layer helps retain the heat you produce by trapping air close to your body. Natural fibers such as wool and goose down are excellent insulators.

SHELL LAYER / OUTER LAYER

The shell layer/outer layer is your shield, protecting you from the elements— It's the critical last piece to the layering puzzle. All SCOTT shells are treated with a durable water repellent (DWR) finish, which ensures that moisture will bead up, and easily roll off the fabric. But keeping the elements out is only half the battle. A good shell-layer also needs to offer good ventilation capabilities, so perspiration can properly exit the body and evaporate rather than condense on the inside of your shell.

INSULOFT/DEFINED LINE JACKET FEATURES

Whether you choose your days hiking for turns or enjoying lift-access terrain, our Insuloft/Defined Line jackets are loaded with features to keep you enjoying the experience. Here are just a few of the features you can expect from shells in this line.

01 TRACKMYDOWN™ filling (Insuloft Light Down Women's Jacket)

02 Quilting without stitches and nice stretch (Downcel Women's Pullover)

03 VX™ padding and stretch shell to stretch with the padding (Insuloft VX Women's Hoody)

04 Elastane binding at hood and cuff opening (Insuloft 3M Women's Jacket)

05 Hood with a balaclava design which can fit under a helmet (Defined Warm Women's Hoody)

06 Laser-cut vents in collar (Defined Plus Women's Jacket)

INSULOFT/DEFINED LINE OUTERWEAR FABRIC TECHNOLOGIES

Our Research and Development team works with leading manufacturers around the world to deliver revolutionary fabric technologies that protect you from the elements and maximize your enjoyment of outdoor activities, 365 days a year.

TRACKMYDOWN™ – TRACKMYDOWN™ brings all the complexities of down to the consumer through this unique interactive tool. Premium traceable down is much more than just about where it came from, and now you can learn about the exact down inside your jacket and what makes premium down, premium. Where it came from is critical to begin with, but with TRACKMYDOWN™, you will also experience the exact verified fill power, content analysis and ultimate cleanliness - all critical elements that differentiate a generic down from a true performance insulation required by the finest technical gear.

3M™ THINSULATE™ FEATHERLESS INSULATION – A kinder alternative to feathers, 3M™ Thinsulate™ Featherless Insulation is an innovative material to replace natural down. A loose-fill insulation designed by scientists that mimics down when dry and is warmer than down when wet.

- + Mimics down
- + Performs when wet
- + Zero Feathers
- + Washable, Squashable
- + Ultra-Puffed
- + Breathable
- + Cloud-light
- + Hypoallergenic
- + Less fiber migration than down

DOWNCEL – Downcel is a down filled, non-quilted bale. The Downcel bales are created by interweaving two shell fabrics together, producing a non-stitched, cell-like structure that incases the down. Using this method, Downcel eliminates the migration of down that would otherwise occur with quilted seams, improving the performance of the garment by avoiding heat loss.

1. During the weaving process down cells are created by simultaneously interlacing 2 layers of woven structure together at strategic points for ultimate warmth retention.
2. The interlacing of the 2 layers creates a woven baffled cell to prevent down migration.
3. Downcel

VX™ ACTIVE INSULATION – The VX™ Active Insulation System - introducing a breakthrough in performance. By combining loose fibers with diverse functions we achieve new levels of balanced performance. Unlike down we are able to choose and combine fibers for moisture management, thermal buffering, warmth to weight, quick dry, loft to weight, resilient long life, soft touch, hollow fiber/boundary layer effects and more.

Unique structure: The insulation's unique morphology mimics down as if clusters of down were strung together in rows creating unbroken down-like waves. The wavy and spring like structure of these varied fibers ensures even warmth, reliable comfort and protection. Avoiding the thick, thin and void issues of down and continuous filament garments.

POLARTEC® POWER DRY® – This highly breathable fabric maximizes its functions due to a grid construction that enhance the warmth and breathability for a minimal weight. This fabric construction provides superior wicking action, quick dry function and helps to keep your skin dry when you sweat.

PRIMALOFT® SILVER ACTIVE – PrimaLoft® Silver Insulation is the go-to for technical performance in a wide range of activities. Millions of air pockets trap body heat in extreme conditions while a lack of bulk provides uncompromised freedom of movement. The PrimaLoft® proprietary treatment ensures the insulation maintains its warmth even in wet conditions. Durability in a lightweight design for active applications, with breathability, packability and softness, deliver a high-performance insulation without compromise.

SCOTT GLOVES FABRIC TECHNOLOGIES

MEMBRANES

GORE-TEX® GLOVES – GORE-TEX® gloves are the ideal solution for all kinds of winter sports: durably waterproof, windproof and breathable - guaranteed. Your hands stay warmer when it's cold, and drier when you perspire.

GORE-TEX® GLOVES + GORE ACTIVE TECHNOLOGY – Drier. Longer. Waterproof and breathable. Gloves engineered with GORE-TEX® inserts + Gore active technology are durably waterproof, windproof and breathable - guaranteed. The whole system of inner lining, membrane and outer material is optimized for extreme breathability. This increases the level of comfort even in a wider range of activity levels.

GORE-TEX® GLOVES + GORE GRIP TECHNOLOGY – Outstanding tactility. Sure grip. Waterproof and breathable. Gloves engineered with GORE-TEX® inserts + Gore grip technology are durably waterproof, windproof and breathable - guaranteed. Thanks to their innovative layered construction, they provide outstanding dexterity and tactility for an optimum grip. This makes it easier to handle your ski poles, zippers, goggles, bags, etc.

GORE-TEX® GLOVES + GORE WARM TECHNOLOGY – Warmer. Longer. Waterproof and breathable. Gloves engineered with GORE-TEX® inserts + Gore warm technology are durably waterproof, windproof and breathable - guaranteed. Even in harsh conditions the whole system of inner lining, membrane and outer material is optimized to keep your hands warmer for longer.

GORE® WINDSTOPPER® GLOVES – WINDSTOPPER® fabric provides a windproof barrier with maximum breathability to keep hands warmer, drier and more comfortable.

DRYOsphere – DRYOsphere fabrics provide 10.000mm/12.000mm waterproof/air permeability barrier from the elements. A shield against water and wind, DRYOsphere fabric also allows for water vapor to escape from the body, keeping you dry and comfortable in any condition.

LINING FABRICS

SOFT FLEECE – A soft textile known for its warmth and comfort next to skin, soft fleece lining allows for a comfortable next-to-skin fit.

SHELL FABRICS

K-SCHOELLER® – K-Schoeller® is an extreme protective fabric comprised of high-tensile fibers that provides high durability with temperature stability and comfort. Extremely abrasion proof, tear resistant, and protective against the elements, K-Schoeller® endures the most intense outdoor activities while comfortably protecting the athlete.

CORDURA® – CORDURA® is a high performance, abrasion resistant fabric. Constructed using high tenacity fiber technologies, CORDURA® fabrics are exceptionally durable allowing products made with CORDURA® to be strong and long-lasting.

AX SUEDE™ SINGLE CONNECT – AX Suede™ Single Connect is a conductive material fully compatible for touch screen sensitivity. Using organic compounds that mimic how the skin interacts with touch screen electronics, AX Suede™ materials allow for the use of electronics without exposing the skin or layering bulky materials.

INSULATION FABRICS

PRIMALOFT® – PrimaLoft® insulation products offer superior performance in cold weather. PrimaLoft® is lightweight, breathable and proven to repel water better than any other synthetic or natural insulation. With PrimaLoft® you stay dry, warm, and comfortable even in the most extreme conditions.

THINSULATE™ – Inch for inch, no insulation keeps you warmer than Thinsulate™, providing up to two times the warmth of other high-loft insulation materials and nearly 1.5 times the warmth of down.

SCOTT 3 FIT SYSTEM

State your needs, find the perfect glove. Customization at its best.

COMFORT FIT

CHARACTERIZED BY: Generous construction with ample PrimaLoft® insulation in the palms, fingers, and back of the hand, while maintaining dexterity.

BEST USES: Coldest of days or sensitive fingers and hands.

REGULAR FIT

CHARACTERIZED BY: Medium construction with less insulation on the palm and fingers to allow for greater mobility.

BEST USES: High-intensity activities requiring greater dexterity or mild weather conditions.

TIGHT FIT

CHARACTERIZED BY: Close-to-the-hand construction with minimal to no insulation.

BEST USES: High intensity activities in the pipe or ski touring or spring weather conditions.
